Using Logo (3)

Logo is able to repeat things to save you having to write out the instruction lots of times.

Look back at your logo 2 sheet. Were there any instructions you had to repeat.

See if you can use the "Repeat" command to draw a square.

To do so you will need to put what is going to be repeated inside square brackets and tell the computer how many repetitions to make.

e.g. REPEAT __ [FORWARD __ RIGHT __]

Write your procedure here:

Investigate what happens when you change the size of the turn in your procedure and increase the number of repeats.

Have a go at drawing some other shapes or patterns using the "repeat" command.
