

Making a shape pattern

Using a ruler and a sharp pencil, draw 8 lines across the square above .

Each line must go from one side of the square to one of the other sides.

You will find that you have now made a number of straight-sided shapes.

Use a different colour for each shape and then fill in the sentences below:

In my square

I have found.....triangles and coloured them.....

I have foundquadrilaterals and coloured them.....

I have foundpentagons and coloured them.....

I have found..... hexagons and coloured them.....
