

Does light travel through every material?

cellophane	cardboard	tissue paper
tracing paper	aluminium foil	
clingfilm	wallpaper	

We tested and sorted these materials into three categories:

<u>Lets light go through clearly</u>	<u>Lets some light through, not clearly</u>	<u>Does not let light through at all</u>

Some materials allow light to travel through them clearly. These materials are called _____.

Some materials allow some light to travel through them, but the light is blurred. These materials are called _____.

Some materials don't allow light to travel through them at all. These materials are called _____.
